Sweet sound of Sonifex

Radio Lollipop, a charity which provides care and entertainment for children and young people in hospital, is using Sonifex' S2 split-desk mixer and other equipment in its brand new studio.

Radio Lollipop opened its studio at the Evelina Children's Hospital in London in May 2008. Set in glass walls, underneath the glass atrium of the hospital, the studio also features equipment from the Sonifex S2 Solutions range of furniture.

The Sonifex S2 split-desk mixer is the centre piece of the studio. It is split with five channels on one side and ten channels on the other and is also configured with six stereo channels, 1 telco channel and 3 mic/line channels.

Richard Butlin, technical sales manager at Sonifex, said: "The Radio Lollipop Evelina project was a lovely, positive project to be involved with because of where it was and also the enthusiasm of the project team. The design of the studio is amazing and I'm sure that it will bring a lot of happiness to the children in the hospital."

The Sonifex S2 is a new breed of radio broadcast mixer. Using the latest technology components, it offers digital audio quality with analogue reliability in a modular format.
