Sonifex presenting new Redbox extender

At **booth 5M7-10**, Sonifex is introducing the Redbox RB-IPE IP extender for GPIO and Analogue Control Signals, a 1RU rack-mount unit designed to provide remote control of GPIO and analogue control voltages over an Ethernet network.

Configured using a built-in Web server, two units can control each other across an Ethernet network, or a single unit can be controlled via Ethernet commands and the Web server interface.

The Sonifex Redbox RB-IPE IP extender.
