## EXHIBITOR HIGHLIGHTS

### Sonifex Shows New Small Mixer

It's always nice to see some growth in the relatively mature line of traditional consoles and mixers. That is, the ones that aren't simply control surfaces for Ethernet/IP networks.

The S1 from Sonifex is a small format mixer designed for on-air use, especially at small stations. Though small, Sonifex insists the S1 does not skimp on features.

Useful features include 10 input channels, fader start for peripherals, telco inputs, talkback functions along with high-pass and low-pass filters per channel.

Physical features include a rotatable I/O panel, analog and digital I/O, 100 mm ALPS faders, host and guest headphone controls and tricolor LED meters. The S1 can be flush-mounted or rack-mounted. It even offers scribble strips on channel strips and aux and ext loops. An integrated power supply keeps the whole package compact.
