## ProdysControlPlus Prodys (1)

**ProdysControlPlus** is a Windows application for centralizing the management of all Prodys audio and video over IP codecs. The codecs that are liable to be controlled with ProdysControlPlus are those belonging to the **ProntoNet**, **Nereus**, Nomada, Quantum and Ikusnet families.

## **KeyFeatures**

Velocition of all codecs on the network, even those behind NAT routers and 3G/4G networks.

 $\checkmark$  Real-time information of all devices including detection, status, alarms, etc...

- Fully customizable user interface that allows the user to monitor and control different devices at the same time on the same window and also any combination of additional windows like Devices browser, Alarms, Status, History, etc... Windows positions, sizes and dockings are also fully customizable.
- Centralized alarm system allows the user to have all alarms information of all devices accessible by any allowed user in a single window, making it very easy to notice and locate any alarm on the system.
- Complete user system with different priority levels and devices access. It is possible to revoke control of devices based on the priority levels and to restrict the device access of each user.
- Centralized and unlimited phone-book allows the user to use the same phone-book with all devices.
